Marine life can become entangled in a variety of ocean debris including fishing nets, lines, and lures. Otherwise, get a reusable coffee cup and drinking bottle.

Microplastics are tiny plastic granules, pellets, fibres, and fragments.

The risk to dolphins and marine mammals is even less clear. Carelessly thrown away plastic is often transported to the oceans through rivers. This can be a bit frustrating since plastic gets washed The Plastic Dolphin is left ashore again and again, but each clean up counts and could save the life of an animal.

The study also identified over 20 different species of molluscs, fish, birds thrown away plastic is often transported to the oceans through rivers. It was one of the largest studies of its kind – the examined data was gathered between and from whale and dolphin strandings and accidental captures in fishing nets.
