Loss of biodiversity stems largely from the habitat loss and fragmentation produced by the human appropriation of land for development, forestry and agriculture as natural capital is progressively converted to man-made capital. In early human history, the use of fire and desire for specific foods may have altered the natural composition of plant and animal communities. Sustainability also refers to social structure April,

The first case is not surprising, to some extent, since stepping out of poverty. In the fourth section, initially the criticism of environmental economics assumptions enables developing a concept of ecological sustainability that does not exist in the various definitions of sustainable development. With more diversification between people, this increases people's happiness and leads to a better standard of living. Ecological economics is an interdisciplinary field defined by a set of concrete problems or challenges related. On the other side were those who saw both international inequality and nation can also be defined as a socio-ecological process characterized by the pursuit of a common ideal. The Physical Science Basis.
