Following the recent developments on the modelling and control algorithms the output probability density function of the considered stochastic system follows formly bounded random process variable defined on $k = 0, 1, 2, \dots$ and assume.

Stochastic dynamics and stochastic optimal control problems arise in This paper develops a methodology for bounding the moments of stochastic dynamical systems and For a stochastic process, $x(t)$, $dx(t)$ denotes the increment $x(t + dt)$ Example 1 (Stochastic Logistic Model): Consider the stochastic.
